

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1 and 16-21 in accordance with the following:

1. (CURRENTLY AMENDED) A position information management system managing position information of a mobile body, comprising:

a terminal ~~for~~ measuring the position of the mobile body, encrypting the measured position information by predetermined encryption means and transmitting the encrypted position information; and

a position recording apparatus ~~for~~ receiving the position information and recording the position information in a an encrypted state ~~where it is encrypted~~,

wherein the position recording apparatus can decrypt the encrypted position information by using ~~the~~ decryption data only when the terminal sends the decryption data to allow the position recording apparatus to decrypt the encrypted position information and the position recording apparatus receives the decryption data from the terminal.

2. (ORIGINAL) The position information management system according to claim 1, wherein

the position recording apparatus transmits to the terminal the encrypted position information of the mobile body corresponding to the terminal, based on a request from the terminal, and wherein

the terminal decrypts the encrypted position information using the decryption data that the terminal retains.

3. (ORIGINAL) The position information management system according to claim 1, wherein

when the position recording apparatus has received predetermined permission information from a first terminal, the position recording apparatus transmits the encrypted position information of the mobile body corresponding to the first terminal, based on a request from a second terminal, and wherein

when the second terminal has received the decryption data retained by the first terminal from the first terminal, the second terminal can decrypt the encrypted position information.

4. (ORIGINAL) The position information management system according to claim 1, wherein

when the position recording apparatus has received predetermined permission information from the terminal, the position recording apparatus transmits the encrypted position information of a mobile body corresponding to the terminal, to a position information service center, based on a request from the position information service center providing predetermined services to the terminal, and wherein

when the position information service center has received the decryption data retained by the terminal from the terminal, the position information service center decrypts the encrypted position information, executes a predetermined process for the decrypted position information and transmits the result of the process to the terminal.

5. (ORIGINAL) The position information management system according to claim 1, wherein

when the position recording apparatus has received the decryption data retained by the terminal from the terminal, the position recording apparatus, based on a request from the terminal, decrypts the encrypted position information of a mobile body corresponding to the terminal using the decryption data, executes a predetermined process for the decrypted position information and transmits the result of the process to the terminal.

6. (ORIGINAL) The position information management system according to claim 1, wherein

when the position recording apparatus has received the decryption data retained by the terminal from the terminal, the position recording apparatus, based on a request from the terminal, decrypts the encrypted position information of a mobile body corresponding to the terminal using the decryption data and transmits the decrypted position information to a position information service center providing predetermined services to the terminal, and wherein

the position information service center executes a predetermined process for the decrypted position information and transmits the result of the process to the position

recording apparatus, and wherein

the position recording apparatus transmits the result of the process to the terminal.

7. (ORIGINAL) The position information management system according to claim 1, wherein

when the position recording apparatus has received predetermined permission information from the terminal, the position recording apparatus, based on a request from a third party, decrypts the encrypted position information of a mobile body corresponding to the terminal using the decryption data, executes a predetermined process for the decrypted position information and transmits the result of the process to the third party.

8. (ORIGINAL) The position information management system according to claim 7, wherein

the predetermined process is a process for responding to a query relating to a mobile body corresponding to the terminal.

9. (PREVIOUSLY PRESENTED) The position information management system according to claim 8, wherein

the position recording apparatus has a guarantee function for the response.

10. (ORIGINAL) The position information management system according to claim 8, wherein

the query is at least one of "where is the current position of the mobile body", "whether the mobile body is/was at a designated place", "whether the mobile body is/was at a designated place on a designated date at a designated time", "where is the position at which the mobile body was on a designated date at a designated time" and "on which data and at what time the mobile body was at a designated place".

11. (ORIGINAL) The position information management system according to claim 1, wherein

the terminal comprises a plurality of encryption means, and is capable of switching the encryption means for encrypting the position information, based on the position of the terminal and/or the time, or on an instruction from a mobile body.

12. (ORIGINAL) The position information management system according to claim 1,
wherein

the terminal comprises a personal authentication means for a mobile body,
and wherein

when a personal authentication is successfully completed, the terminal can
measure the position of the mobile body, encrypt the measured position information with
predetermined encryption means and transmit the encrypted position information.

13. (ORIGINAL) The position information management system according to claim 1,
wherein

when the position recording apparatus receives the decryption data from the
terminal and decrypts the encrypted position information using the decryption data,

the position recording apparatus stores in a temporary memory the
decryption data, the decrypted position information and the result of a predetermined process
executed for the decrypted position information and erases from the temporary memory the
decryption data, the decrypted position information and the result of the process after
transmitting the result of the process to the terminal.

14. (ORIGINAL) The position information management system according to claim 13,
wherein

the position recording apparatus executes the predetermined process.

15. (ORIGINAL) The position information management system according to claim 13,
wherein

the position recording apparatus transmits the decrypted position information
to a position information service center providing predetermined services utilizing the position
information and receives from the position information service center the result of the
predetermined process executed by the position information service center.

16. (CURRENTLY AMENDED) A terminal comprising:

a measuring unit for measuring the position of a mobile body;

an encryption unit for encrypting the measured position information by
predetermined encryption means;

a communication unit for transmitting the encrypted position information to a

position recording apparatus; and

a decryption unit having decryption data for decrypting the encrypted position information, the decryption unit, when receiving the encrypted position information from the position recording apparatus via the communication unit, decrypting the received encrypted position information using the decryption data,

wherein the terminal sends the decryption data to the position recording apparatus only when the terminal allows the position recording apparatus to decrypt the encrypted position information.

17. (CURRENTLY AMENDED) A position recording apparatus comprising:

a communication unit ~~for~~-receiving encrypted position information relating to the position of at least one mobile body, from a terminal of the mobile body; and

a database in which the position information is recorded in ~~the~~ an encrypted state,

wherein the position recording apparatus can decrypt the encrypted position information by using decryption data only when the terminal sends the decryption data to allow the position recording apparatus to decrypt the encrypted position information and the position recording apparatus receives the decryption data from the terminal.

18. (CURRENTLY AMENDED) The position recording apparatus according to claim 17, further comprising:

an acquisition unit ~~for~~-acquiring the position information recorded in the database, in response to a predetermined request, wherein

the communication unit transmits the acquired position information from the communication unit in the encrypted state.

19. (CURRENTLY AMENDED) The position recording apparatus according to claim 17, further comprising:

an acquisition unit ~~for~~-acquiring the position information recorded in the database, in response to a predetermined request; and

a decryption unit ~~for~~-decrypting the acquired encrypted position information, wherein

when the decryption unit receives, together with the request, ~~the~~ decryption data ~~for~~-decrypting the encrypted position information, the decryption unit decrypts the acquired

encrypted position information and transmits the decrypted position information.

20. (CURRENTLY AMENDED) The position recording apparatus according to claim 17, further comprising:

an acquisition unit ~~for~~ acquiring the position information recorded in the database, in response to a predetermined request;

a decryption unit ~~for~~ decrypting the acquired encrypted position information;

and

a processing unit ~~for~~ executing a predetermined process for the decrypted position information, wherein

when the decryption unit receives, together with the request, the decryption data ~~for~~ decrypting the encrypted position information, the decryption unit decrypts the acquired encrypted position information and the processing unit transmits the result of the predetermined process executed for the decrypted position information.

21. (CURRENTLY AMENDED) The position recording apparatus according to claim 20, further comprising:

a temporary memory ~~for~~ storing the decryption data, the decrypted position information and the result of the process; and

an erasing unit ~~for~~ erasing the decryption data, the decrypted position information and the result of the process from the temporary memory after transmitting the result of the process.
